

Record-color transport: finite systems remain substantially damped

All 960 declared histories • three axis modes averaged within each history

-- Conditional Euler-limit target
 — N=16; 256 histories
 — N=32; 128 histories
 — N=64; 64 histories
 — N=128; 32 histories

Bars: pointwise 95% whole-history bootstrap intervals; no simultaneous coverage.
 Fixed $\gamma=1$, $k_0=1.1$; iid 14-color initialization. Lines connect observations; no fitted damping law.
